

## 2016 International Forum on DFMA Boothroyd Dewhurst

### The Design Engineer's Guide for Total Product Cost Using DFA

Matthew Miles

DFMA and Value Engineering Manager

# Topics

- Product Cost Breakdown
- DFA Analysis
- Finance Basics and Overhead
- Total Cost of Ownership
- DFA Examples

# Product Cost

- DFMA Experience – Where is your company?
  - Initial interest in DFMA
  - Completed an introductory DFMA workshop
  - Restarting the initiative
  - DFMA is established, fully implemented
- Product Simplification and Cost Improvement

Source: Boothroyd Dewhurst, Inc.

**Understand how to apply DFA towards materials, labor, and overhead costs**

# DFA Applications

## Product

## Product state

- New Concepts/Next Gen – initial CAD layout, before launch
- Existing Product – baseline the assembly
- Cost Reduction – sustain existing product
- Benchmarking – understand the competition's design/cost

## DFA Analysis

## Design Data

- Theoretical Min. Part Count
- Total part count
- DFM part & tooling costs
- Assembly time
- Assembly operations
- DFA Index
- Total product cost
- Total production life cost
- Suggestions for redesign

# Design Data from DFA

DFMA® - Boothroyd Dewhurst, Inc.  
Analysis Totals for Design for  
Assembly (DFA)

Wednesday, March 16, 2016

## Example Summary

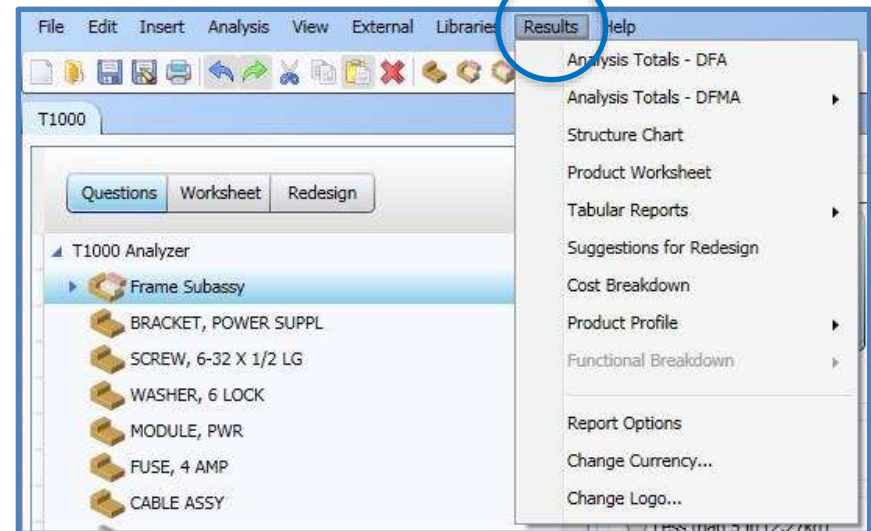

**DFMA**  
BOOTHROYD DEWHURST  
T1000 Analyzer.dfa

Entries including repeats	T1000
Parts meet minimum part criteria	39
Parts are candidates for elimination	172
Analyzed subassemblies	2
Separate assembly operations	103
<b>Total entries</b>	<b>316</b>

Assembly labor time, s	
Parts meet minimum part criteria	567.18
Parts are candidates for elimination	2591.00
Insertion of analyzed subassemblies	42.58
Separate assembly operations	1653.76
<b>Total assembly labor time</b>	<b>4854.52</b>

Design efficiency	
DFA Index	5.21

Assembly labor time, s

Let's walk through an example:

## Product

Materials \$700

Labor \$50

Overhead \$250

---

\$1000

# Product Cost Breakdown

## Example Product

Materials      \$700    (70%)

- Parts
- DFM should-costs
- Tooling (Amortized)
- Supplier quotes
- Known off the shelf costs

Labor            \$50      (5%)

- Direct Labor Rate
- Average salary of the workers who touch the parts
- For this example:  
2.00 hour assy routing @ \$25/hr

Overhead        \$250    (25%)

- Overhead rate at the site where the product is manufactured
- Typically shown as a percentage
- For this example: 500%
- (Overhead Labor Rate = \$150/hr)

# DFA – Materials (Parts)

Materials \$700

- DFA – Minimum Part Criteria
- Ideation – Category 1's
- DFM – Mfg. Alternatives
- Impact to Total Cost

Materials  
\$700

Item function

Item has no function except to:

- Fasten or secure other items
- Connect other items
- Item has other function

Category 2

Minimum part criteria

Item must be separate from all other items assembled, because:

- Base part (usually only the first)
- Moves relative to all other items
- Must be a different material
- Separate to allow assembly
- No fundamental reason exists

Category 1

Suggestions for redesign

Category 1

- Candidates for elimination other than fasteners and connectors

Category 2

- Fasteners
- Connectors
- Separate operations

Category 3

- Handling or insertion difficulties

Source: Boothroyd Dewhurst, Inc.

# Dynisco/Viatran – 2013 DFMA Forum

## Pressure Transducer Assembly

	<u>510</u>	<u>511</u>	} <u>Reductions to:</u> Part Count Total Mfg. Cost Labor Time
• DFA Index	7.0	<b>9.6</b>	
• Part Count	102	<b>66</b>	
• Fasteners	82	<b>46</b>	
• PCBs	2	<b>1</b>	

# DFA – Labor (Assembly Time)

Suggestions for redesign

Category 1

Candidates for elimination other than fasteners and connectors

Category 2

Fasteners

Connectors

Separate operations

Category 3

Handling or insertion difficulties

Category 2 example →

**Reduce Labor Costs by understanding detailed assembly time with DFA**

Labor \$50 2.0 hrs

- Assembly time = “Touch Time”
- Category 2 & 3 parts

T1000		Repeat count	Total count	Process time per product, s
Questions	Worksheet	Redesign		
	SCREW, 6-32 X 1/2 LG	2	2	36.05
	WASHER, 6 LOCK	2	2	13.65
	MODULE, PWR	1	1	10.80
	FUSE, 4 AMP	2	2	13.17
	CABLE ASSY	1	1	24.34
	Lay xfrmr wires to power module	4	4	9.04
	SCREW, 6-32 X 1/2 LG	4	4	58.47
	WASHER, 6 LOCK INT T	4	4	20.87
	WASHER, 6 FLAT PLATE	4	4	20.87
	MOUNTING RAIL, DIN U	1	1	14.54
	SCREW, M4 X 12 LG PH	2	2	36.05
	CLAMP,END E/UK 12014	2	2	33.78
	OVERVOLTAGE PROTECTO	1	1	10.04
	Connect xfrmr wires to overvoltage p	5	5	82.50
	STANDOFF, 1/4 INCH N	13	13	510.36

# Finance Basics and Overhead

Operating Profit = Revenue – COGS – SG&A

~~SG&A (Selling, General & Admin) – costs of selling, engineering, finance, IT, HR and admin. (salaries)~~

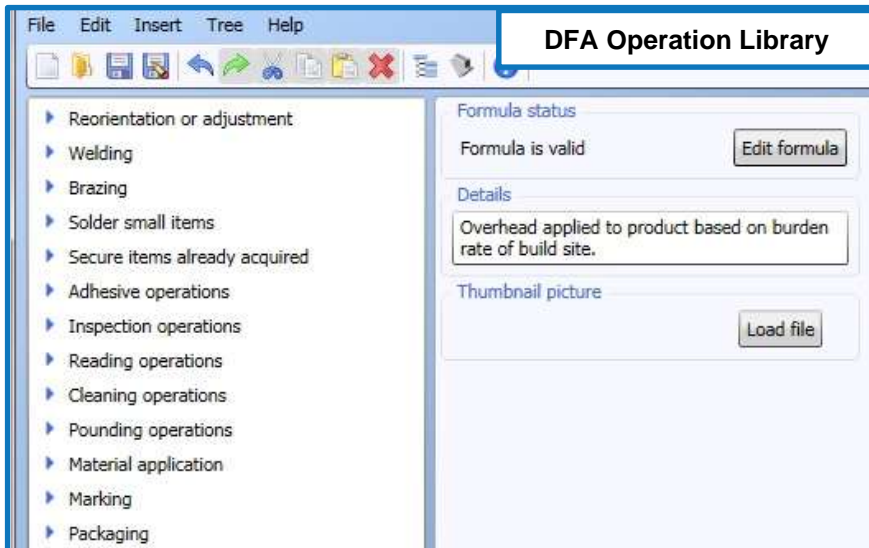

The Design Engineer  
can disregard SG&A  
for analysis purposes

Product Gross Margin = Revenue – COGS

Cost of Goods Sold (COGS) – direct costs attributable to the production of the goods sold or delivery of services provided by a company.

- **Materials, Labor, Overhead**
  - Overhead – rent, utilities, maintenance/repair/operations (MRO), shipping/freight, bin/bulk items (fasteners/hardware)

# DFA – Overhead

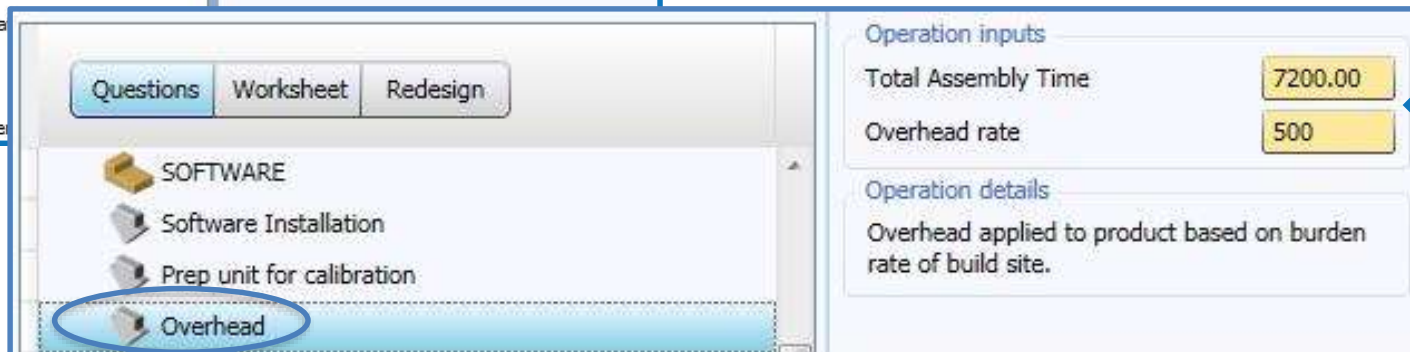

Overhead \$250

- Custom Operation in DFA

Applied Overhead to Product =

Assy Time x Direct Labor Rate x Overhead Rate

$$7200s \times \$25 \times 500\% = \$250$$

Results per entry for: Overhead | Process time = 0.00s | Process cost = \$250.00 | Assembly tool or fixture cost = \$0.00 | Item cost = \$0.00 | Total cost = \$250.00

# Product Cost Summary

<u>Example Product - Before</u>			→	<u>After - DFA Application</u>		
Materials	\$700			Materials	\$350	
Labor	\$50	2.0 hrs		Labor	\$25	1.0 hr
<u>Overhead</u>	<u>\$250</u>	<u>500%</u>		<u>Overhead</u>	<u>\$125</u>	<u>500%</u>
	\$1000				\$500	

- New Concepts/Next Gen Designs – set standard Gross Margin at launch
- Existing Product/Cost reduction
  - Materials reduction – reduced cost, improved Gross Margin
  - Labor/Overhead reduction – create opportunity, increase capacity
- Benchmarking – full cost & Gross Margin estimate

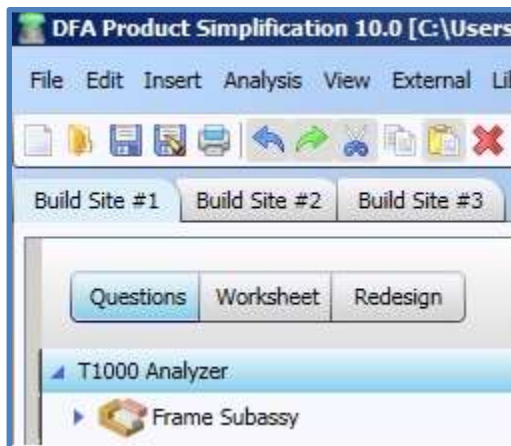

# Total Cost of Ownership

# Total Cost of Ownership

## TCO

- Strategic sourcing decisions
- Where to build the product
  - Custom DFA Operation
  - Compare site locations

## Costs in DFA

## TCO Inputs

- Risk factors
- Product volume
- Lead time
- Material, Labor, Overhead
- Transportation costs
- Cost of Poor Quality
- Build site profit
- Inventory carrying costs
- Recurring Costs
- Transition & setup costs

## What do you get?

- 1-year snapshot of TCO costs
- Revise inputs for additional years
- Chart costs (i.e. Years 1 thru 5)

# TCO Inputs into DFA Custom Operation

- Enter remaining TCO Inputs

# TCO Inputs into DFA Custom Operation

The screenshot displays the DFA software interface with three tabs: 'Build Site #1', 'Build Site #2', and 'Build Site #3'. The 'Questions' tab is active, showing a list of product components on the left and input fields for various parameters in the center and right.

**Product & Site Inputs:**

- Yearly Volume: 300
- Lead Time, wks: 12
- Total Product Cost, \$: 2165.88
- Total Landed Cost: (blank)
- Transportation Cost, \$: 500.00
- Total Cost of Ownership: (blank)
- Cost of Poor Quality, %: 10
- Cost of Poor Quality per unit, \$: 286.58
- Profit at Build Site, %: 10
- Profit at Build Site per unit, \$: 280.25
- Inventory Carrying Cost, %: 10
- Inventory Carrying Cost per unit, \$: 74.44
- Recurring Cost, \$: 20000.00
- Recurring Cost per unit, \$: 66.67
- One Time/Transition Cost, \$: 5000.00
- One Time Cost per unit, \$: 16.67
- Risk Factor, %: 8.3
- Risk Unit, \$: 180.53
- TCO per unit, \$: 1498.128

**Risk Factors:**

- Inflation, weight, #: 11
- Inflation, probability, %: 100
- Labor, weight, #: 1
- Labor, probability, %: 20
- Energy/Fuel, weight, #: 6
- Energy/Fuel, probability, %: 75
- Business Continuity, weight, #: 5
- Business Continuity, probability, %: 50
- Health/Pandemic, weight, #: 12
- Health/Pandemic, probability, %: 100
- Infrastructure, weight, #: 4
- Infrastructure, probability, %: 80
- Quality (recipe loss), weight, #: 25
- Quality (recipe loss), probability, %: 100
- Customer Perception, weight, #: 3
- Customer Perception, probability, %: 25
- Currency, weight, #: 13
- Currency, probability, %: 100
- IP Transfer, weight, #: 17
- IP Transfer, probability, %: 100
- People, weight, #: 7
- People, probability, %: 75
- Culture, weight, #: 8
- Culture, probability, %: 75
- Language, weight, #: 8
- Language, probability, %: 85
- Skill, weight, #: 10
- Skill, probability, %: 100
- Financial & Legal, weight, #: 14
- Financial & Legal, probability, %: 100
- Service Level, weight, #: 2
- Service Level, probability, %: 100
- Trust/Corruption, weight, #: 15
- Trust/Corruption, probability, %: 100

**Operation details:**

- Total Cost of Ownership operation calculator. Use to analyze TCO for building product at different geographical locations.
- Can be used with or without burden operation in a DFA analysis.
- Operation input steps:
  1. Enter TCO operation to end of DFA analysis.
  2. Enter volume, lead time and total product cost (DFA total).
  3. Enter transportation cost.
  4. Enter percentages for cost of poor quality, profit, and inventory carrying cost.
  5. Enter recurring and one time costs.
  6. Enter weights and probabilities for all risk factors. For weights, numbers 1 through 17 should be used only once, with corresponding probability of occurrence, 0-100%.
- Once TCO operation is complete, DFA analysis can be copied, TCO recalculated for different build site inputs, and compare TCO costs on the product.

- Full screen capture of TCO operation in DFA looks like this...

**Compare TCO Costs between Build Sites**

The screenshot shows the 'DFA Product Simplification 10.0' software interface. It features a menu bar with 'File', 'Edit', 'Insert', 'Analysis', 'View', and 'External'. Below the menu bar is a toolbar with various icons. The interface has three tabs: 'Build Site #1', 'Build Site #2', and 'Build Site #3'. The 'Questions' tab is active, showing a list of product components on the left and input fields for various parameters in the center and right.

**Results per entry for: TCO | Process time = 0.00s | Process cost = \$1498.14 | Assembly tool or fixture cost = \$0.00 | Item cost = \$0.00 | Total cost = \$1498.14**

# Real-World Examples

# DFA – Product Design Example

DFMA® - Boothroyd Dewhurst, Inc.  
Analysis Totals for Design for  
Assembly (DFA)

Monday, March 28, 2016

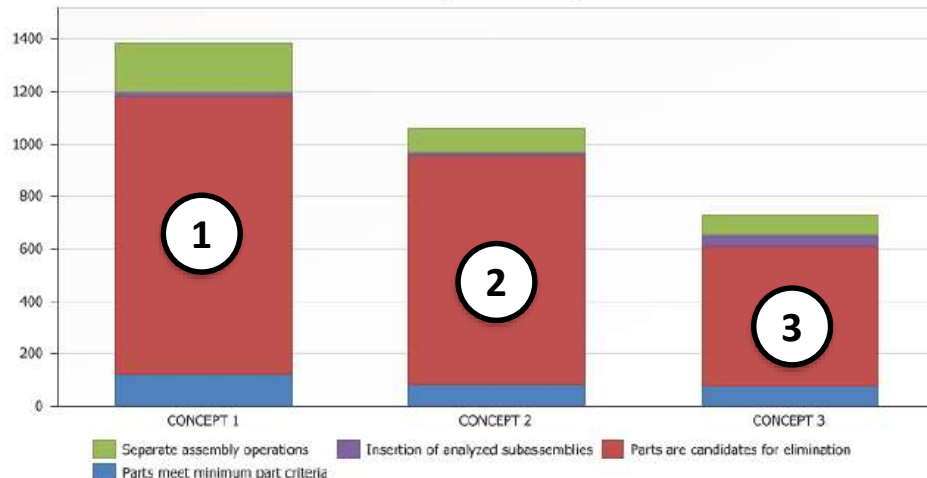

Example-1.dfax

Entries including repeats	CONCEPT 1	CONCEPT 2	CONCEPT 3
Parts meet minimum part criteria	17	12	15
Parts are candidates for elimination	47	44	37
Analyzed subassemblies	3	1	5
Separate assembly operations	11	11	10
<b>Total entries</b>	<b>78</b>	<b>68</b>	<b>67</b>

Assembly labor time, s	CONCEPT 1	CONCEPT 2	CONCEPT 3
Parts meet minimum part criteria	123.79	84.51	74.63
Parts are candidates for elimination	1054.78	871.65	534.46
Insertion of analyzed subassemblies	20.67	11.44	43.54
Separate assembly operations	181.69	88.00	74.93
<b>Total assembly labor time</b>	<b>1380.93</b>	<b>1055.60</b>	<b>727.56</b>

Design efficiency	CONCEPT 1	CONCEPT 2	CONCEPT 3
DFA Index	4.49	4.12	7.50

Assembly labor time, s

- ① Concept 1
- ② Concept 2
- ③ Concept 3

- New Concept/Next Gen Design
- DFMA used to quantify part count, labor time, and total cost
- Concept 1 & 2 ideas combined resulted in the Concept 3 design
- From 1 to 3:
  - Labor time -47%
  - Total estimated cost -32%

**Applied early, DFA reduces total product cost before launch to production**

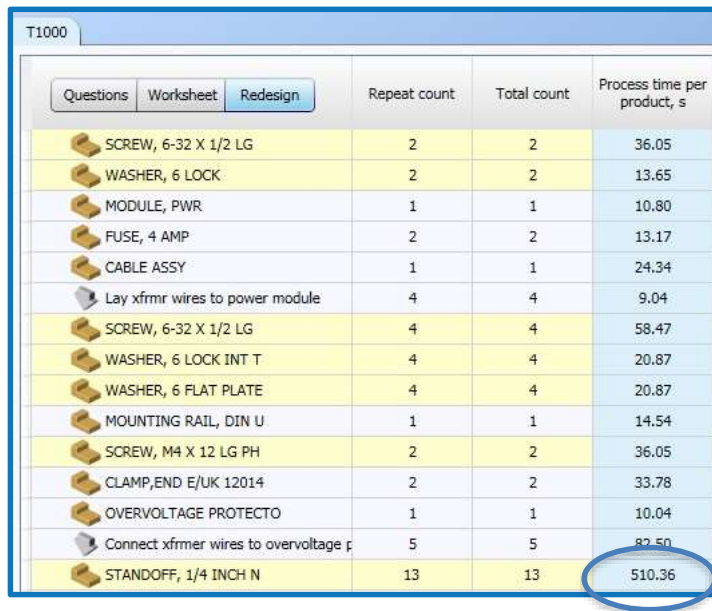

# DFA Labor Time vs. Time Study

## Example Product:

Conducted time study 1.48 hrs / 89 min.

DFA assembly time 1.35 hrs / 81 min.

DFA vs. Time Study -9%

Questions	Worksheet	Redesign	Repeat count	Total count	Process time per product, s
SCREW, 6-32 X 1/2 LG			2	2	36.05
WASHER, 6 LOCK			2	2	13.65
MODULE, PWR			1	1	10.80
FUSE, 4 AMP			2	2	13.17
CABLE ASSY			1	1	24.34
Lay xfrmr wires to power module			4	4	9.04
SCREW, 6-32 X 1/2 LG			4	4	58.47
WASHER, 6 LOCK INT T			4	4	20.87
WASHER, 6 FLAT PLATE			4	4	20.87
MOUNTING RAIL, DIN U			1	1	14.54

CLAMP,END E/UK 12014			2	2	33.78
OVERVOLTAGE PROTECTO			1	1	10.04
Connect xfrmr wires to overvoltage p			5	5	82.50
STANDOFF, 1/4 INCH N			13	13	510.36

- 81 min. / 4854.52s in DFA
- Category 2
  - 13 nylon standoffs
  - Threaded, 510.36s
  - 8 minutes of Labor!
  - Move to snap-in supports

Identify the “pain-points” in assembly with DFA and improve

# DFMA and TCO Analysis

- Analysis request to VAVE Group
  - Full DFMA & TCO analysis on an existing US built product
  - Determine if manufacturing site should change
  - Most cost effective decision
- Analysis
  - DFA on product assembly
  - DFM on 50+ parts
  - Labor/Overhead Comparison
  - Total Cost of Ownership

Cost Summary	US Existing	China	Asia
Labor Rate	\$33.00		
Overhead Rate	503%		
Labor Hours	18		
Materials, \$	\$X		
Labor, \$	\$594		
Overhead, \$	\$2,988		
Total Product Cost	\$X	?	?
TCO Cost	\$X	?	?

# Total Cost of Ownership in DFA

## Analysis Steps

- First, determine total cost for each site
  - Materials, Labor, Overhead

Cost Summary	US Existing	China	Asia
Labor Rate	\$33.00	\$4.56	\$2.04
Overhead Rate	503%	600%	1020%
Labor Hours	18	18	18
Materials, \$	\$X	\$X	\$X
Labor, \$	\$594	\$82	\$37
Overhead, \$	\$2,988	\$410	\$375
Total Cost	\$X	-23%	-24%
After TCO	\$X	?	?

- Second, run TCO analysis

## TCO Inputs – Custom DFA Operation

- Overall risk factor per build site
- Product volume
- Lead time
- Material, Labor, Overhead Costs
- Transportation costs
- Cost of Poor Quality
- Build site profit
- Inventory carrying costs
- Recurring Costs
- Transition & setup costs

# DFMA and TCO Analysis

- Analysis request to VAVE Group
  - Full DFMA & TCO analysis on an existing US built product
  - Determine if manufacturing site should change
  - Most cost effective decision
- **Decision:**
  - Minimal savings if moved
  - Stay with existing mfg site
  - Cost reduction of the product through sustaining activities

Cost Summary	US Existing	China	Asia
Labor Rate	\$33.00	\$4.56	\$2.04
Overhead Rate	503%	600%	1020%
Labor Hours	18	18	18
Materials, \$	\$X	\$X	\$X
Labor, \$	\$594	\$82	\$37
Overhead, \$	\$2,988	\$410	\$375
Total Product Cost	\$X	-23%	-24%
TCO Cost	\$X	-2%	-9%

(Year 1 Cost Comparison)
